BU 1000 - Introduction to Financial Topics

Credits: 1

This course introduces fundamental financial concepts. It provides students with crucial knowledge and skills to make informed decisions to promote financial health and prosperity in personal and business settings. The course decodes and explains complex financial concepts, and helps students develop actionable strategies for managing their finances,Students will learn how choices influence career options, and future earning potential. Students will also learn to apply decision-making skills to evaluate career choices and set personal goals. Upon completion of the course, students should have a working knowledge of the basic financial skills needed to help them achieve financial independence and success.

When Offered:

Summer Only

BU 1500 - Business in American Society

Credits: 4

The course is designed to introduce the history of U.S. Business and its concepts and functions. It examines external and internal economic, global, and demographic factors that influence the role of business on a societal and individual level. Topics include ethical challenges, types of business organizations, entrepreneurship, managerial functions, the creation of needs and wants via the marketing mix, the interpretation of financial information and wealth creation, and the role of human resources and labor in contemporary business. Offers an overview of U.S. business and an introduction to the origins of its specialized areas (e.g., accounting, finance, marketing, operations, management), and their influence in North American society. Emphasis is placed on the management of these functions in a global, multicultural, team-based environment and the development of a proactive approach to the dynamic nature of the place of business in

contemporary society.

Prerequisites

ECI

When Offered:

Spring Only

BU 3010 - Information Systems for Managers

Credits: 4

Introduction to the concept of information systems as strategic assets of the enterprise utilized to achieve strategic advantage. Investigation is also made of the use of information systems at the tactical and support business levels. Technology is always discussed in terms of its interaction with human systems (socio-technical systems). The goals are to facilitate management decision processes and to exploit information technology for strategic advantage.

Prerequisites

EMS

When Offered:

Every semester.

BU 3071 - Information Technology and Applications

Credits: 4

The purpose of this course is to provide the student with the requisite skills needed to complete technology-based assignments in accounting and business courses, obtain the necessary skills expected of entry-level accountants and financial managers (0-2 years) and help prepare students for technology-related subjects tested in professional certification exams (e.g., CPA, CMA, and CIA).

Prerequisites

MA 2000

Applied Statistics or equivalent

When Offered:

Every semester.

BU 3150 - Topics in Technology Disruptions, AI and Innovation

Credits: 2

Technology disruption and innovation have changed the way workplaces function. Digital technologies have affected us in that we can no longer use one toolset our whole career and we need to adapt to an ever-changing landscape for work and life. These technologies, such as Artificial Intelligence (AI), mobile applications, marketing systems, and extensions, to name a few, have changed how we interact with software. We now expect everything to be connected to online systems that can be changed daily, and if it isn't web or mobile-supported, we think it's outdated. This is the tip of the iceberg technology and innovation are the cornerstones of how knowledge workers are going to function in business. As we see the landscape changing we need to provide students with knowledgeable skill sets that will give them technology expertise on a wide variety of these business systems. Understanding these may give us insight on the new challenges that affect intellectual property, business analytics and data security. The toolsets that are available are vast and include new GPT clients, interfacing systems for marketing, automation, augmented reality, and mobile device apps. The ability to provide a foundation-level usage of these technologies will open their skill set to list a variety of current industry software systems to their resumes. If we look at the Google Suite as a required prerequisite for students coming out of any university and Excel for an accounting student, these tools are the standard today, but future toolsets provide students with a well-rounded approach that opens doors. Students need to have a holistic approach to software and applications that can be utilized in any application that is presented to them. This class is a hands on learning class where students will specifically work with software such as Artificial Intelligence (AI), mobile apps, web apps, canva, google suite, and Microsoft 365. To understand the standard and specialized software that is required knowledge in business. By learning the methods and tools students will be well equipped to apply these tools in their jobs. I used to run innovation at Stony Brook University, and every business student who worked for me learned 3D printing. Even if it was something, they didn't have to learn from their major. Numerous of them have told me how they were asked about the use of the technology on their resumes. It was a skill that showed analytical thinking from a technology perspective. The tools available on the web are vast. We will only be able to touch on the software that is widely used but the students will be working on projects that will investigate AI use cases such as software that could assist them in turning any PDF into a PowerPoint file. These a free tools they will navigate that demonstrate the new business model that is appealing to the next generation. Understanding the business model and technological use will allow them to see how future revenue models may affect their purchasing decisions as leaders in their careers. We need to give our students this technology perspective that ensures they have the basics as well as the details to succeed in the new marketplace.

Prerequisites

English Proficiency; Math Proficiency, TBD

When Offered:

Every Semester

BU 3250 - Business Analytics

Credits: 4

This course prepares students to collect, describe, analyze and forecast data with a primary focus on data analysis, decision making, and managing uncertainty. Using advanced statistical tools and case study methodology, students will be challenged to make economic and financial decisions involving large data sets. Topics include probability, statistics, data visualization, regression, data mining, and modeling. Additionally, students will develop technological agility from exposure to a variety of software packages utilized in today's business environment.

Prerequisites

Minimum grade of "C"in MA 2080

& MA 2000

BU 3502 - Principles of Accounting I

Credits: 3

Introduction to financial accounting with focus on how financial statements are structured and used by proprietorships and corporations. Topics: double entry, accrual accounting, service vs. merchandise companies, cash, accounts receivable and payable, inventories, fixed assets and depreciation methods, and net earnings. Develops foundation for subsequent courses in accounting, finance, MIS, and management.

Prerequisites

MA 1020

When Offered:

Every semester.

BU 3511 - Principles of Accounting II

Credits: 3

Emphasis shifts from accounting theory (Principles I) to giving students experience in preparation of financial statements. New topics include payroll, stockholders' equity, earnings per share, long-term debt, marketable securities, and statement of cash flows. The course also includes management topics, including job order costing, process costing, cost-volume- profit analysis, budgeting, and planning for capital investments.

Prerequisites

BU 3502

When Offered:

Every semester.

BU 3600 - Principles of Business Law

Credits: 2

A study of the nature and functions of law introducing the student to the legal system, constitutional, administrative, tort, criminal, consumer protection, employment, and contract law.

Prerequisites

EMS

When Offered:

Every semester.

BU 3605 - Intermediate Business Law

Credits: 2

An in-depth study of the law of contracts, agency, and partnerships.

Prerequisites

BU 3600

When Offered:

Every semester.

BU 3610 - Advanced Business Law

Credits: 2

The study of real and personal property, bailment, documents of title, bankruptcy, secured transactions, and trusts and estates.

Prerequisites

BU 3605

When Offered:

Every semester.

BU 3800 - Marketing: Principles and Concepts

Credits: 4

A comprehensive introduction to marketing principles with emphasis on the marketing concept as means of distributing goods and services in a competitive economy. Examines market determination and population segmentation for product planning, product distribution systems, pricing policies and practices, and promotion strategies.

Prerequisites

EMS

When Offered:

Every semester.

BU 3905 - Business Communications

Credits: 2

This course is an introduction to the fundamentals of business communications. It emphasizes planning, research, organization, clarity, conciseness, positive tone, mechanics and format. Business letters, electronic communications, memos, and reports will be written and analyzed. Replaces BU 3900.

Prerequisites

EMS

When Offered:

Every semester.

BU 3911 - Business Presentation Skills

Credits: 2

Presentation skills are critical in business to inform and motivate a range of audiences, from clients and investors to management and staff. Effective speakers, coupled with other essential skills, tend to move up the corporate ladder to increasing responsibility and success. This course provides the foundations for delivering professional business presentations. The course will explore verbal and nonverbal skills, delivery techniques, and presentation structure. Through repeated stand-and -deliver exercises, students will put these techniques into practice, test approaches, and improve their ability to speak with confidence, poise, clarity, and conviction.

Prerequisites

EMS

When Offered:

(offered occasionally)

BU 4035 - Web Systems and Electronic Commerce

Credits: 4

This course covers the basics of web systems, furthering an understanding of them through the development of e-commerce applications and systems. The course provides an overview of several current web technologies, including

client side applications such as web design using JavaScript and VBScript and server side applications on Apache (Linux) and IIS (Windows) using CGI, ASP, and Java Servlet technologies. Students will implement an e-commerce application using the learned components involved in a web system and e-business strategies. Projects are carried out individually and in groups.

Prerequisites

EMS

When Offered:

Every year.

BU 4110 - Organizational Behavior and Management

Credits: 4

This course examines the evolution of organizations and managerial roles in contemporary organizations. It provides a comprehensive analysis of the functions and processes of management. Topics include the influence of business on society, international business, the managerial functions of planning, organizing, leading, and control, and the social influence of management in terms of ethics, leadership, power, communication, conflict, and organizational culture. Also studied are employee motivation, diversity, group dynamics, and decision-making.

Prerequisites

EMS

When Offered:

Every semester.

BU 4120 - Global Business

Credits: 4

The goal of this course is to provide an introduction to international business environment and operations. The course analyzes the social, economic and political forces shaping multinational business' activities abroad and uses several models to understand cultural differences. An analysis of how cultural factors influence and affect decision making and organizational culture in a global context are the major thrusts of this course.

Prerequisites

EMS

When Offered:

Every semester.

BU 4130 - Entrepreneurship

Credits: 4

The steps leading to the establishment of an independent business involving choice of business, structure, capital, startup, management practices, legal and financial considerations.

Prerequisites

BU 4110

When Offered:

Every year.

BU 4149 - Business Consulting

Credits: 2

The Business Consulting course covers the complete process of business consulting, from developing business proposal and mobilizing a consulting team, to producing deliverables and deploying solutions. The course is designed to provide students with the background and skills needed to pursue a career in consulting.

The course discusses specific applications in such consulting fields as strategy consulting, training, organizational development, technical, and business development consulting. Specific and practical concepts, tools, techniques and frameworks are covered that can be used in all forms of consulting and any area of consulting application.

Prerequisites

EMS and Math Proficiency; BU 33502; BU4110; BU3800; BU5196

Recommended: BU4762; BU3010; BU5110

BU 4160 - Advanced Business Analytics

Credits: 4

The main goal of the course is to expose students to cutting-edge analytical techniques and contemporary software applications used in organizational operations and decision making, including Microsoft Office tools and analytical software with the focus on their business applications. Students will learn to collect, organize, analyze, and present information in a comprehensive manner.

Students will understand the concept of databases and their functions, conduct database queries, introduce big data analytical skills, and perform basic analysis utilizing contemporary analytical packages and programming.

Prerequisites

MA2080 Precalculus; MA2000 Applied Statistics; BU3010 Info Systems for Managers or BU3071; BU3250 Business Analytics

BU 4180 - Bus Data Vis: Appl & Tech

Credits: 4

This course is designed to explore the concept of data visualization, its applications, benefi ts, and importance in various fi elds. Emphasis is placedon practical applications of data visualization techniques using industry-relevant tools. Students will engage in hands-on projects with popular data visualization tools and software applications to analyze business data and communicate insights visually.

Prerequisites

BU/MA 3250

When Offered:

Every Semester**Note:**

Required course for new Business Analytics specialization, within B.S. Business Administration degree.

BU 4190 - Business Data Visualization

This course is designed to equip business students with the skills and knowledge to effectively use data visualization in decision-making and communication. Emphasis will be placed on practical applications of data visualization techniques using industry-relevant tools. Students will engage in hands-on projects to analyze business data and communicate insights visually.

This course also provides an introduction to the fundamental principles and techniques of data visualization. Students will explore the concept of data visualization, its applications, benefits, and importance in various fields. The course will also cover hands-on experience with popular data visualization tools and software applications.

Prerequisites

BU 4160 and BU 3010 or BU 3070 and CS 2521

BU 4250 - Accounting Information Systems

Credits: 4

Examines how management information systems concepts are used to develop accounting information systems that support decisions by management and other interested groups. Considers the analysis, design utilization, and evaluation of technology-based and manual-based financial information systems. Focuses on key business processes, internal controls and risks, flowcharting, and information provided to management.

Prerequisites

BU 3071

, BU 3511

BU 4500 - Intermediate Accounting I

Credits: 4

An expanded treatment of accounting theory and principles: investigation of accounting for cash and temporary investments, receivables, inventory costing and evaluation, fixed asset acquisition, depletion and depreciation, intangible assets, and current liabilities. Emphasis is on the analysis of the recommendations and pronouncements of the American Institute of Certified Public Accountants and the Financial Accounting Standards Board.

Prerequisites

BU 3511

When Offered:

Every semester.

BU 4510 - Intermediate Accounting II

Credits: 4

An expanded treatment of accounting theory and principles: investigation of accounting for capital, retained earnings, pensions, leases, cash flows, and earnings per share. Emphasis is on the analysis of the recommendations and pronouncements of the American Institute of Certified Public Accountants and the Financial Accounting Standards Board.

Prerequisites

BU 4500

When Offered:

Every semester.

BU 4570 - Federal Income Tax I

Credits: 4

A comprehensive study of tax principles and concepts that apply to income tax planning. The course focuses on the tax treatment of individuals. Topics include gross income, exclusions, deductions, realization and recognition of income, tax rates, the treatment of capital assets and the use of tax credits.

Prerequisites

BU 3511

When Offered:

Every semester.

BU 4590 - Cost Accounting

Credits: 4

This course provides students with an in-depth understanding of how cost information is gathered, analyzed and reported for purposes of planning, control and decision-making. Includes a thorough examination of the design and operation of job order, process and standard cost systems. Related emphasis is also placed on cost behavior, planning and control of material, labor and overhead costs, activity-based costing, flexible budgeting and variance analysis. Variable costing, cost-volume-profit-analysis and related techniques are explored as tools to enhance management decision-making.

Prerequisites

BU 3511

When Offered:

Every semester.

BU 4720 - Global Financial Markets

Credits: 4

This course explores the fundamentals of the global financial environment. It covers international capital market, money market and derivatives markets. Foreign-exchange risk and international portfolio diversification are discussed.

Prerequisites

BU 4762

When Offered:

Every semester.

BU 4762 - Financial Management I

Credits: 4

This course provides an introduction to the basic ideas of finance. The primary concepts covered include introductory accounting knowledge, time value of money, risk-return trade-off, the basic characteristics of financial markets and financial securities, cost of capital budgeting.

Prerequisites

BU 3502

, MA 2000

When Offered:

Every semester.

BU 4774 - Financial Markets and Institutions

Credits: 4

This course focuses on the importance of the financial system in providing liquidity and risk diversification in a globally interconnected economy. The course develops a series of applications of principles from finance and economics that explore the connection between financial markets and the economy. Specific topics will include: interest rate determination, term structure, institutional make-up of capital markets, and risk management of financial institutions. The recent credit crisis and its origin in subprime mortgages will be reviewed.

Prerequisites

BU 4762

, PE 2430

When Offered:

Every semester.

BU 4802 - Integrated Marketing Communication

Credits: 4

This course focuses on the importance of developing synergy of marketing communications practices and relationships for producers, manufacturers, and retailers with their target consumers. It emphasizes strategic planning and management of integrated marketing communications covering a variety of functional areas (promotional mix elements) including advertising, public relations, publicity, direct marketing, digital advertising, marketing and social media, sales promotion, and event sponsorship, as well as basic principles of brand communications and position strategies.

Prerequisites

BU3800

When Offered:

Occasionally

BU 4820 - International Marketing

Credits: 4

This course examines the nature and practice of global marketing management. It includes the problems and issues of marketing across national boundaries as well as within different national markets. There is an emphasis on the global environment in which international marketing takes place including product, pricing, supply chain distribution, and promotion strategies of international marketing managers. It examines ways of integrating and coordinating the firm's marketing programs in diverse markets worldwide.

Prerequisites

BU3800**Prerequisite/Corequisite**

Recommended: PE2430

When Offered:

Every semester.

BU 4830 - Digital Marketing Foundations

Credits: 4

This course is designed to integrate the principles of marketing, consumer behavior, and brand strategy in a digital marketing context. Students will pursue the Google Professional Certificate in Digital Marketing and create integrated artifacts to demonstrate their learning. *Through successful completion of this course, the student will:*

1. Conceptualize digital marketing through an industry lens.
2. Understand the foundational principles of Digital Marketing and E-Commerce.
3. Identify opportunities to attract, engage, and interact with customers online.
4. Analyze and design effective digital marketing campaigns.
5. Measure success of digital marketing campaigns.
6. Develop customer loyalty online.
7. Build, launch and manage e-commerce retail stores.

Prerequisites

BU 3800

BU 4851 - Consumer Behavior

Credits: 4

Incorporates concepts from the behavioral sciences that provide a foundation for the study of buyer behavior. The course evolves through an exploration of the contributions from economics, psychology, sociology and cultural anthropology that reveal the motivations underlying consumer behavior.

Prerequisites

BU 3800

Must be enrolled in one of the following Fields of Study (Major, Minor, or Concentration):

- Accounting
- Business Administration
- Digital Design Marketing
- Finance
- Marketing
- Women's and Gender Studies

When Offered:

Every semester.**Note:**

Must be enrolled in a major, minor or specialization within the School of Business OR with instructor's approval.

BU 5115 - Operations Management

Credits: 4

Introduction to the theoretical and practical applications of OM. Topics: logistics; facility location layout; acquisition and replacement forecasting; planning; operation scheduling and control; inventory planning and quality control.

Prerequisites

BU 3010

or BU 3071

, MA 2000

When Offered:

Every semester.

BU 5125 - Business Ethics

Credits: 4

This is a managerially oriented course dealing with the relationship between business and society. A variety of viewpoints will be presented in the examination of the following topics: social responsibility of business, quality of work life, ecology and environment, consumerism, business and government, and managerial ethics.

Prerequisites

BU 4110

When Offered:

Occasionally.

BU 5171 - Human Resource Management

Credits: 4

Emphasizes the necessity of managing individuals in an organization as resources crucial to survival and success. The relationship of human resource management to strategic planning and implementation is analyzed. Specific attention is given to the theories, policies, techniques and methods related to human resource planning, recruitment, selection, interviewing, training and development, performance, appraisal, separation, labor relations and compensation in compliance with relevant legislation.

Prerequisites

BU4110 AND BU 3250 or MA 2300 AND MA2000 C- or higher; senior status 88 credits or above.

When Offered:

Every semester.

BU 5180 - Business Intelligence and Data Mining

Credits: 4

This course explores the integration of business intelligence (BI) and data mining techniques to extract valuable insights from large datasets for informed decision-making. Students will learn how to leverage data mining tools and techniques to analyze and interpret business data, identify patterns, and make data-driven decisions. The course will cover various aspects of BI, including data warehousing, data preprocessing, data modeling, and the application of data mining algorithms in a business context. The course covers data preprocessing, modeling, and interpretation of results using popular programming languages and tools.

Prerequisites

MA 2000

BU3010 OR BU3071

BU3250

CS2521

When Offered:

Spring Only

BU 5190 - Business Strategy and Policy

Credits: 4

Synthesizes the concepts and techniques developed in prior courses. The student is required to apply concepts from management, accounting, marketing, economics, and finance using the casework and/or simulation approach.

Prerequisites

BU 3800

, BU 4110

, BU 4762

Senior Status - 88 credits or higher

When Offered:

Every semester. Must be taken in student's senior year.

BU 5195 - Management Seminar

Credits: 4

Selected current issues in the field are discussed. Emphasis will be on student research and critical analysis of topics. Topics may vary from year to year.

Prerequisites

MA 2000

, BU 4110

When Offered:

Occasionally.

BU 5196 - Leadership

Credits: 4

This course is designed to provide an overview of the fundamental concepts of basic leadership models and theories, as well as an in-depth understanding of contemporary issues and perspectives on Leadership and Supervision. Emphasis will be on attempting to understand and develop the skills, attitudes, and knowledge bases required to effectively lead and influence others in the global environment of the 21st century.

Prerequisites

BU4110

When Offered:

Every semester.

BU 5199 - Internship in Business Administration

Credits: 4

Designed for students who want experience in the work place participating in the management environment. This is an excellent opportunity to prepare for a career in the field. Open to Business Administration majors only.

Prerequisites

Senior status; approval by Director of Career Services

When Offered:

Every semester.

BU 5505 - Essentials of Government and Nonprofit Accounting

Credits: 2

This course is an introduction to government and nonprofit accounting. Fund accounting theory as well as financial statement presentation will be discussed for both government and nonprofit entities. The course also presents an overview of government auditing standards.

Prerequisites

BU 4500

When Offered:

Every semester.

BU 5510 - Forensics & Fraud Examination

Credits: 2

Course Description - A study of the role of the forensic accountant in different facets of fraud examination and deterrence, such as the design and implementation of controls, fraud schemes and devices, cybercrime, criminology, corruption, bribery, financial statement fraud, interviewing and interrogation, as well as the roles of various key players in a fraud examination, such as the litigation support team, valuation analysts, and investigators. This course will introduce students to the various skillsets needed for success in the forensic accounting profession, including data analysis, interviewing, critical thinking, communication, and problem-solving.

Prerequisites

BU 4510

When Offered:

Fall / Spring Semesters

BU 5520 - Financial Accounting Research

Credits: 2

This course will provide a critical update and evaluation of recent development in financial reporting and accounting theory. The emphasis will be on an in depth evaluation and application of some of the more advanced topics that may have been briefly covered in Intermediate Accounting 2, such as derivatives, cash flow, pensions, leases, accounting errors and changes, and disclosure. Extensive use will be made of the FASB Codification of accounting standards and case studies

Prerequisites

BU 4510

When Offered:

Every semester.

BU 5525 - Fundamentals of International Accounting

Credits: 2

A discussion of the evolution of international accounting principles and practices. International Financial Reporting Standards (IFRS) and reference to accounting and reporting requirements in selected countries will be covered. Current developments and implications for multinational organizations are also addressed.

Prerequisites

BU 4510

When Offered:

Occasionally

BU 5540 - Advanced Accounting

Credits: 4

This course covers accounting for partnerships: formation, operation, dissolution, and liquidation. There is an in-depth analysis of business combinations including statutory mergers, consolidations, and acquisition of subsidiaries, preparation of consolidated financial statements including the equity method and elimination entries. Additionally, the course includes an introduction to foreign currency translation and transactions, the SEC, and Sarbanes-Oxley.

Prerequisites

BU 4510

When Offered:

Every semester.

BU 5550 - Auditing

Credits: 4

Study of the professional ethics and possible legal liability of the auditor. Examination of current auditing theory and techniques and their application to specific balance sheet and income statement accounts to obtain evidence that management's financial statements are fairly presented, including the generally accepted auditing standards, role of internal control, uses of sampling, effects of information technology, and the various reports rendered by auditors.

Prerequisites

BU 4510

When Offered:

Every semester. Must be taken in student's last semester.

BU 5555 - Foundations of Accounting Information Systems

Credits: 2

Examines the fundamental roles and functions of accounting information systems in providing support for decisions by management and other interested groups. Topics include database concepts, accounting data flow, and business processes. Students will learn how to apply software such as Microsoft Access in designing their own systems.

Prerequisites

BU 3010

or BU 3071

, BU 4500

When Offered:

Every year.

BU 5560 - Financial Statement Analysis

Credits: 2

An advanced level course covering the analytical tools necessary for conducting a financial analysis of a business and its financial statements. The course will focus on selecting the appropriate analytical tools and the effective use of notes to the financial statements for making financial decisions about a business. Topics include ratio and trend analysis, as well as an examination of annual reports, 10K and 10Q filings.

Prerequisites

BU 4510

When Offered:

Occasionally.

BU 5599 - Internship in Accounting

Credits: 4

Designed for students who want experience in the work place participating in the accounting environment. This is an excellent opportunity to prepare for a career in the field. Open to Accounting majors only.

Prerequisites

Senior standing; approval by Director of Career Services

When Offered:

Every semester.

BU 5710 - Financial Modeling and Forecasting

Credits: 4

The course is aimed at giving students a working knowledge of the analytical tools that are important in the decisions firms regularly make Emphasis will be placed on the performance goals of the firm, the forecasting of investment returns and firm cash flows, and the estimation of investment firm risk parameters. Regression analysis, along with other statistical modeling tools where necessary, will be used to estimate relationships among economic variables, and as a forecasting tool. The course is aimed at consolidating knowledge gained in other functional areas of business. While knowledge of quantitative techniques is presupposed, the emphasis is more on economic intuition as a practical problem-solving tool.

Prerequisites

BU 4762, PE 2420

, PE 2430

When Offered:

Every semester.

BU 5740 - Investment Management and Security Analysis

Credits: 4

Study of theories, techniques and approaches for determining the values of major types of securities including derivation of capitalization rates, forecasting of earnings and technical analysis. Evaluation of the dividend, capital leverage controversies and the efficient market hypothesis. Introduction to modern portfolio theories and investment strategies.

Prerequisites

BU 4762

When Offered:

Every semester.

BU 5760 - Corporate Finance

Credits: 4

This course introduces students to the principle of maximization of the firm's value in a world with uncertainty. It covers firm's capital structure and dividend policy, cash flow management, short-term financing, merger and acquisition and leasing.

Prerequisites

BU 4762

When Offered:

Every year.

BU 5789 - Futures and Options Markets

Credits: 4

This class will provide students with a basic knowledge of derivatives in options, futures, and forwards markets. Topics include option valuation models, principles of forward and futures pricing, structure of markets for derivative securities, and strategies for hedging and speculation.

Prerequisites

BU 4762

When Offered:

Every year.

BU 5790 - Seminar in Finance

Credits: 4

Discussion of topics in finance chosen by instructor.

Prerequisites

BU 4762 - Financial Management I

BU4792 AND PE2420 AND PE2430

When Offered:

Occasionally.

BU 5798 - CFA Level I Exam Preparation

Credits: 4

This course examines ethical and professional standards and reviews financial analysis tools including economics; quantitative analysis; financial accounting and statement analysis; markets and institutions; and asset valuation and portfolio management techniques.

Prerequisites

BU 4762

, BU 5760

, BU 5771

When Offered:

Occasionally.

BU 5799 - Internship in Finance

Credits: 4

Designed for students who want experience in the work place participating in the finance environment. This is an excellent opportunity to prepare for a career in the field. Open to Business Administration, Finance specialization majors only.

Prerequisites

Senior status; approval by Director of Career Services

When Offered:

Every semester.

BU 5800 - Marketing Research

Credits: 4

The course examines qualitative and quantitative marketing research techniques. It provides a step by step coverage of a research project including problem definition, research design, sampling, questionnaire construction, data analysis, and report preparation. Students will design and execute a small scale research project.

Prerequisites

MA 2000

, BU 3800

When Offered:

Every semester.

BU 5841 - Strategic Marketing

Credits: 4

This course applies the marketing strategy concept as a management tool for optimizing performance. It focuses on the marketer's deployment of resources to achieve goals in a competitive environment. Students will be applying knowledge gained in other courses to analyze case studies. In addition, the course explores current marketing topics such as social media and business analytics and integrates them into strategic planning.

Prerequisites

BU 3800

When Offered:

Every semester.

BU 5880 - Brand Theory and Strategy

Credits: 4

This course focuses on how brands are created and managed within the marketing process. Using an interdisciplinary marketing and social science perspective, students analyze the cultural system of brand identity generated by product manipulation and consumer choice, creating value for both buyer and corporation. Marketing policies are evaluated through an analysis of product development, distribution and pricing with particular focus on the newest communication tools in advertising, public relations and sales promotions.

Prerequisites

BU 4851

NOTE: Must be enrolled in one of the following Fields of Study (Major, Minor, or Concentration):

Accounting

Business Administration

Digital Design Marketing

Finance

Marketing

Women's and Gender Studies

When Offered:

Every semester.

BU 5891 - Marketing Seminar

Credits: 4

A program tailored to the needs and interests of students of marketing, advertising, and public policy issues. Students complete an actual business project related to marketing.

Prerequisites

BU 3800

, Senior Standing.

When Offered:

Occasionally.
